

Concrete attack complexities (Golub & Van Loan 2013; Cheon et al. 2017; Li & Nguyen 2020; Ajtai et al. 2001)

Cryptosystem	Best Attack	Parameters	Cost (ops)
DS	Known-plaintext	$n = 384$	$O(n^3) \approx 5.7 \times 10^7$
NI	Embedding lookup	$d = 384$	$O(d) = 384$
ROME	Procrustes	$q = m = 384, n = 512$	$O(qmn + n^3) \approx 2.1 \times 10^8$
CKKS	Lattice sieve	$N = 8192, TC128$	$2^{(0.292N)} \approx 2^{2392}$
